

CHANNEL DELIVERY

EXPAND LINEAR OFFERINGS AND STREAMLINE WORKFLOWS

Expand content offerings and capitalize on new opportunities. Acquire broadcast-quality feeds securely and deliver them where you need.

Channel Delivery simplifies and automates the process to contribute licensed streams and associated metadata to the cloud-distribution platform of your choice.

A shared transport infrastructure, built with the existing Comcast carrier-grade content delivery network (CDN), sends broadcast-quality channels to partners via a unique, reliable, user datagram protocol (UDP) CDN stream to edge servers, improving delivery speed.

CHANNEL DELIVERY FEATURES

- Broadcast-quality channels and reliable operations
- Reliable UDP
- 4 national data centers (East, West, Central, and Mountain)

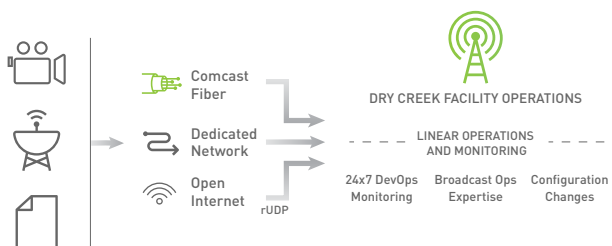

While broadcast reliability is expected, linear acquisition is often limited by infrastructure. Let Comcast Technology Solutions deliver a more efficient process.

CHANNEL DELIVERY

WHY IT WORKS

- Uses existing Comcast proven acquisition technology to aggregate channels
- Gives direct handoffs into cloud infrastructure
- Broadcast 99.99% uptime

WHAT IT MEANS FOR YOU

Channel Delivery adds value to the ROI equation at both ends: optimizing operational cost and content monetization simultaneously.

- Reliability of the Comcast infrastructure
- Flexibility to utilize existing processing and distribution
- Lower risk of high-latency and content degradation
- Higher-quality streams and faster delivery due to less network traversing
- Single point of multi-network channel acquisition
